## SEO

**WWW Resolved**

**Perfect, WWW is Resolving.**

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

**Ip Canonicalization**

**Yes**

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

**Robots.txt**

**<https://www.buy-osmium.com/robots.txt>**

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

**Sitemap**

**<https://www.buy-osmium.com/sitemap.xml>**

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

External Links: noFollow (0.00%)   
Internal Links : (96.10%) 

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

✓ Favicon OS Favicon Found  
⚙️

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

! Print CSS No  
⚙️

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

 **Open Graph**  **No**

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

 **W3C Validation**  **No**

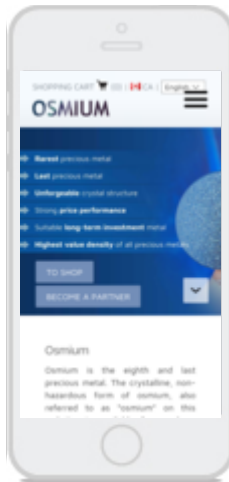

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

 **SSL Enabled**  **Yes**

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.
